Introduction

As is well known, most projects are very complex, have numerous inter-dependent and inter-related activities, involve heavy investments, require high level of technology and need effective management of voluminous resources. They cross geographical boundaries, corporate channels, traditional systems and cultural diversities. Modern projects have inherent difficulties, uncertainties and risks. They interact technically, economically and socially with the environment. The fast changing environments of the present era impose numerous financial, legal, ethical, environments, and logistic constraints. Project management involves use of technical and management skills to achieve the project objectives, within the specified time, budgeted cost and predefined quality specifications, by leading the project participants, efficiently, effectively and ethically. While our engineers possess technical expertise, they often lack project management skills.

Objective

The main Objectives of the Course are to discuss advanced project management tools so as to orient engineers with the knowledge and skills needed to manage such projects, covering aspects like formulation of a project and management of its scope, organization, time, resources, costs, quality, procurement, risks, information system and interpersonal skills.

Contents

Introduction-Project Planning, Implementation & Control, Formulation and Appraisal, Time Management, Resource Management, Cost Planning and Control, Quality, Safety and Environment, Procurement and Contract management

Risk Management, Online Computerized Monitoring System (OCMS), MS Project, Managing Project Information system, Financial Management, Organization, Team building and Interpersonal skills
